**MODIFICATIONS:**

- Added plain bearing to base servo to dampen oscillations.
- Widened, tapered and added additional bracing to arm structural links for increased rigidity.
- Added servo motor cable management slots and cutouts.
- Lowered base box frame servo mount locations to lower the CG slightly.
- Added holes to base plate to allow mounting arm to heavier base to prevent Reactionary movements of the arm assembly.
- Added geometry for optional thin plain bearings at linkage pin points.
